Claims Rejected

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 2, “enmeshes” is incorrect because a planet carrier does not “enmesh” planet gears; instead the carrier supports the planet gears. Applicant’s error renders the claim indefinite.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Barnum ‘422, Sawyer ‘125, Rossman ‘947, Orr ‘646, Page ‘936, Roe ‘083, and Ito ‘426. All of these references show a simple planetary gearing where the carrier drives an output load, and each of the ring gear and the sun gear are driven at either variable or constant speeds by independent power sources to cause an output shaft to rotate at continuously variable speeds. The equations in the claims are inherent in the laws governing planetary gearing design and power flow and appear to be derived from basic gear theory.

The examiner takes Official Notice that any claimed subject matter that is not specifically addressed in the rejection of the claims is old and well known to those of ordinary skill in this art. See MPEP 2144.03
